

AJAYA KUMAR BEHURA

Senior Full Stack Developer | React.js, Next.js, Angular | Node.js, PHP | React Native & Native (Kotlin/Swift) | AI Integration

+91 8810204003 | ajayakumarbehura12@gmail.com | LinkedIn | github.com/geniuneAjay | Faridabad, Haryana

PROFESSIONAL SUMMARY

Senior Full Stack Developer with 3+ years of experience building and owning production web and mobile applications end to end, from client requirements and database architecture to development, App Store/Play Store release, and cloud deployment. Built 7+ business platforms (SFA, Loyalty, Dealer Management, HRMS, Store, Hiring, Maintenance) used by 4000+ field and office users across leading plywood and laminate brands. Deep expertise in React.js, Next.js, Angular, Node.js, PHP, and MySQL, plus native mobile development in Kotlin and Swift, including a custom background location tracking plugin written from scratch for Ionic and React Native. Integrates AI into real business workflows: LLM-based natural-language-to-SQL reporting, AI chatbots, voice-driven data entry, and n8n automation. Currently leading the development team and Sales Operations at Wigwam Ply.

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer – Leading Team & Sales Operations — Savitri Woods (Wigwam Ply) April 2026 – Present

- Lead and mentor the development team: task planning, code reviews, and collaboration on shared features and projects.
- Own the company's complete in-house technology stack (SFA, Loyalty, HRMS, Store, Hiring, Maintenance, Guard Management), independently architecting, building, deploying, and maintaining each system.
- Integrated AI into the SFA: an LLM-powered reporting assistant that answers management questions from live data, a voice assistant for field check-ins, attendance, and expenses, and AI chatbots for dealer queries (see Key Projects).
- Designed database schemas and table architecture for high-volume modules (GPS tracking, order booking, attendance) to keep queries fast and reduce server load.
- Gather requirements from Sales, HR, and management, translate them into architecture and module design, and maintain technical documentation as systems evolve.
- Deploy and manage production applications on Oracle Cloud and Hostinger servers, handling go-live, domains, SSL, backups, and security updates.
- Use Claude Code extensively as an AI pair-programmer for architecture design, code generation, refactoring, and debugging, significantly speeding up delivery.
- Run Sales Operations alongside technology: monthly review meetings (MRM), target tracking, and review of each sales user's field working, using dashboards built in-house.

Full Stack & Mobile Application Developer — AbacusDesk IT Solutions Sept 2023 – March 2026

- Built Basiq360, a multi-tenant 360° business product (SFA, Loyalty, Dealer Management, Service) on Next.js, React.js, React Native, and Node.js, letting one configurable codebase serve multiple client companies.
- Wrote a custom background location tracking plugin from scratch with native modules in Kotlin (Android) and Swift (iOS), used in both Ionic and React Native apps, with tracking even after the app is closed and offline sync; received special recognition for the system.
- Owned the full mobile release lifecycle on iOS and Android: Xcode builds, code signing and provisioning, TestFlight, App Store and Play Store submissions, review compliance, and production updates.
- Led client meetings end to end, from requirement gathering and solution design to demos, user training, and go-live, for 7+ plywood and laminate brands.
- Reduced manual reporting by 40% through workflow automation and improved order accuracy by 15% with real-time stock and order visibility.
- Delivered loyalty and rewards platforms handling 10,000+ QR coupon scans with points, scheme management, and redemptions.

KEY PROJECTS

Native Background Location Tracking Plugin — Kotlin, Swift, Xcode, Ionic, React Native

- Built native Android (Kotlin) and iOS (Swift) modules from scratch and packaged them as one plugin usable from both Ionic and React Native apps.
- Keeps tracking field reps even when the app is in the background or fully closed, with battery-optimized location updates to reduce drain on reps' phones.
- Stores locations on the device when there is no network and syncs them to the server once connectivity returns, so no GPS data is lost in low-network areas; powers GPS attendance and route monitoring for 4000+ users.

AI Reporting Assistant (Natural Language to SQL) — OpenAI GPT API, PHP, MySQL

- A manager types a question in plain English; the GPT model, given the system's database structure, generates the SQL query, which runs on the live database.
- The result is converted back into a plain-language answer, so management gets instant reports without developer help.

Voice Assistant for SFA — Voice Recognition, Mobile App

- Field reps complete check-ins, attendance, and expense entries by speaking, e.g. saying a party's name checks them in at that party, removing manual form filling on the move.

Basiq360 – Multi-Tenant 360° Business Product — Next.js, React.js, React Native, Node.js, Redux, REST APIs

- One configurable product combining SFA, Loyalty, Dealer Management (DMS), and Service modules, so multiple client companies run from a single platform.
- SFA: field reps' visits and routes shown on web maps for live management visibility, with offline data capture that syncs automatically when the network is back.
- Loyalty app: QR code scanning to earn and redeem points, payment gateway integration with handling for failed and retried payments, and JWT login with secure on-device token storage.
- DMS: distributors place orders, check inventory, and track delivery status, with search, filters, and pagination for large product catalogues, synced with the backend via REST APIs.

AI Chatbot for Dealer Queries — OpenAI API, LLM

- Answers dealer and business questions in natural language, reducing manual support load on the sales team.

AI Workflow Automation & Rapid Prototyping — n8n, OpenAI API, Claude API, Slack API, Playwright MCP, Node.js

- Built an n8n workflow that picks up Slack mentions, uses GPT to turn the message into a clear task, and creates it automatically in the internal portal, removing manual task logging.
- Set up an AI-assisted prototyping workflow combining browser automation (Playwright MCP) with LLM-driven code generation to turn client requirements into working demos quickly.

TECHNICAL SKILLS

Frontend: React.js, Next.js, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, Responsive Design

State Management: Redux, Context API, NgRx

Mobile: React Native, Ionic, Kotlin (Android), Swift (iOS), Xcode, Android Studio, Native Plugin Development, Background Location, Offline Sync

Backend & APIs: Node.js, PHP, REST API Design & Integration, JWT Authentication, Role-Based Access Control (RBAC), Payment Gateway Integration

Databases: MySQL (Schema Design, Joins, Query Optimization), PostgreSQL, MongoDB, Firebase

AI & Automation: OpenAI GPT API, Claude API, n8n, Playwright MCP, Natural Language to SQL, AI Chatbots, Voice Recognition, Claude Code

Cloud & DevOps: Oracle Cloud, Hostinger, Linux Server Deployment, Docker, CI/CD Pipelines, Domains & SSL, Git, GitHub

Testing: Unit Testing, Functional Testing, Debugging

Mobile Release: App Store Connect, TestFlight, Google Play Console, Code Signing & Provisioning

System Design: Requirement Analysis, Multi-Tenant Architecture, Database Architecture, Technical Documentation

CLIENTS

Oggan Laminate, Advance Laminates/Advance Ply, Black Cobra, Amulya Mica, Sylvan Ply, Woodline, Real Ply – SFA, loyalty, scheme, claims, and incentive automation.

EDUCATION

Master of Computer Applications (MCA) — Maharishi Dayanand University Sep 2022 – May 2024

B.Sc. (Computer Science) — Maharishi Dayanand University June 2019 – June 2022

ACHIEVEMENTS

- "Best Coder 2024" award, AbacusDesk IT Solutions.
- "Best Critical Problem Solver" award and cash reward for resolving a mission-critical production issue for a major client.
